

IP Fabric empowers our network engineers with their **innovative** network automation approach that brings a sense of **sustainability** to our networks.

Client profile

Industry: Engineering
Company: Škoda Transportation
Employees: 5000+

Challenge

At SKODA, we owe our strong position in the Western European market to our core values of **innovation** and **sustainability**.

Even though you'll still find a few of our offices and production right here in Pilsen, the Czech Republic, our corporate activities and infrastructure network spans the globe.

Before IP Fabric, if we wanted to get a list of hosts connected to a network, we would have to painstakingly collect and correlate information from numerous sources manually.

Trying to maintain an up-to-date map of a network that consists of more than tens of thousands of devices posed an immense challenge for our organization.

Solution

We were first drawn to IP Fabric by their values, which we noted were similar to our own. IP Fabric empowers our network engineers with their innovative network automation approach that brings a sense of sustainability to our networks.

Their revolutionary platform automatically collects network infrastructure data and delivers comprehensive analytics reports within minutes, giving us peace of mind knowing that at any moment, we can gain and share clear insight into our infrastructure network.

In the past, we'd spend days preparing processes to verify that information was flowing through our networks securely, and by the time we were able to run them, we would be working with old information.

Today, thanks to IP Fabric's ability to generate end-to-end path simulations within seconds, we can rest easy knowing that everything is working as it should be.

Benefit

Unlike our old manual documentation approach, which severely limits visibility and the ability to share knowledge, IP Fabric provides crystal-clear insights into what's going on and makes sharing the results incredibly convenient.

Our network infrastructure has become noticeably more accessible, and our network engineers can review Dynamic Network Maps to see what's going on within our networks whenever they want.

In short, IP Fabric is a game-changer.

At SKODA, we highly recommend this tool to anyone who values accessibility and performance.
