

# After implementing IP Fabric, **the platform cut our troubleshooting times by more than 50%!**

## Client profile

**Industry:** Education  
**Company:** Technical University of Ostrava  
**Students:** 24 000+

## Challenge

At the Technical University of Ostrava, we strive to take a responsible and individual approach towards our students. Those who attend our university come from all walks of life, including seniors, socially disadvantaged students, and students with special needs.

We believe that everyone has the right to a good education, so we advocate for equal access and strive to give our students the tools for success.

And IP Fabric has become an irreplaceable part of our efforts.

With nearly 9,000 students enrolled across six different faculties, our network infrastructure has become increasingly complex.

We used to struggle to commit a significant amount of work hours trying to keep up with our systems and inevitably fell behind.

## Solution

We started using IP Fabric platform after we eventually realized that our network had become too complex for us to work with on our own. Now, we wished we would have done it sooner.

Almost directly after we started to use IP Fabric, we immediately discovered several suboptimal settings, that had been piled up during normal operational process. We would eventually had been able to locate these issues, but not that effectively.

IP Fabric's network visualization enabled us to save a great deal of time and resources on troubleshooting, assessment, and network maintenance.

Now we're able to generate up-to-date Network Analysis Reports instantly, instead of spending months creating materials that would be outdated before they're even finished.

With automatically generated network models, we can rest easy knowing we can immediately resolve any technical misalignments that may occur, including some we didn't even know about before we started using IP Fabric!

Thanks to IP Fabric, we can instantly identify and troubleshoot underlying problems and vulnerabilities within our network.

## Benefit

After implementing IP Fabric, **the platform cut our troubleshooting times by more than 50%!**

The platform allowed us to allocate resources that we usually wasted manually mapping end-to-end paths in our hopelessly complex network towards other more important tasks.

Instead of worrying about the ever-expanding number of students that complicate our network, we're able to rest easy knowing that we'll be able to handle whatever challenges come our way.

IP Fabric's second-to-none platform doesn't just give you part of your life back – it gives you peace of mind.
