IP FABRIC

IP Fabric | Air Bank

Air Bank reduced network analysis time from **1 month to 30 minutes** with IP Fabric and fully automated their network audits

ipfabric.io

Challenge

As an innovative 21st century Czech bank offering a new generation of online banking, Air Bank has to comply with various IT regulations and security standards.

In the past, the Air Bank team had to spend months preparing network analysis reports for external auditing firms, which are required on a regular basis. One of the biggest challenges they faced was not only collecting all of the necessary data from their IT network infrastructure, but also analyzing this data to identify potential risks and their corresponding impact. Sharing this data across networking and security teams was an arduous task.

Solution

For Air Bank, the decision to adopt IP Fabric was an easy one. With IP Fabric, they are able to generate up-to-date network analysis reports on demand. The platform collects all of the data from their network and provides immediate insights on capacity, performance and risk issues, including an overview of their potential impact on their business. IP Fabric finally lets them democratize and share this data with audit, security and networking teams in one platform.

On top of this, IP Fabric creates a "digital copy" of their network infrastructure, including device configuration and state data. This was a must for Air Bank for their security audits, as it allows them, amongst other things, to determine if traffic traveling from one site to another is hitting firewalls and security rules with a single click of a button.

Benefits

After adopting IP Fabric, Air Bank have reduced their manual network audit workload by 90%. The out of the box reporting features highlight business risks and their respective impacts.

Now, the team are able to generate network analysis reports with a single push of a button, without sacrificing any data quality, much to the joy of their auditors.

> **This investment in IP Fabric will return in less than six months**

> **We recommend this tool to all financial service organizations that require regular audits & reporting**

About IP Fabric

IP Fabric is a vendor-neutral network assurance platform that automates the holistic discovery, verification, visualization, and documentation of large-scale enterprise networks, reducing the associated costs and required resources whilst improving security and efficiency.

It supports your engineering and operations teams, underpinning migration and transformation projects. IP Fabric will revolutionize how you approach network visibility and assurance, security assurance, automation, multi-cloud networking, and trouble resolution.

Don't take
our word for it

See how assurance can transform your approach to network management.
